

Facilities Management

The Smart Water People

Expertise you can rely on

Expertise in all areas of asset creation, optimisation and management, providing cost, time and outcome orientated solutions that support the successful delivery of water, wastewater and sewage projects.

As well as designing, building and installing plant & equipment, MAK Water provides efficient and professional industrial waste water, sewage and water treatment support for total peace of mind, allowing you to focus on what you do best.

MAK Water operates service offices in every mainland state in Australia, and is able to offer flexible solutions for service and maintenance (planned and emergency), remote monitoring, technical assistance and full operational and maintenance support

HEALTH, SAFETY AND THE ENVIRONMENT

MAK Water places the Health and Safety of our people, clients and contractors, and care of the Environment as our highest priority.

MAK WATER FACILITIES MANAGEMENT FACTS & CUSTOMER BENEFITS

- ◆ Service offices Australia-wide
- ◆ Quality locally sourced components
- ◆ Guaranteed level of service and technical support with in-house process design and engineering
- ◆ Competitive pricing & best value
- ◆ Flexible solutions to customer requirements
- ◆ Compliance issues and risk mitigation managed by an expert
- ◆ Key Performance Indicators for safety, quality, productivity, and cost reduction
- ◆ 24/7 Call out Service
- ◆ ISO 9001 compliant quality systems and processes

FACILITY MANAGEMENT OF WATER TREATMENT AND WASTE DISPOSAL ASSETS

Investments in the water supply infrastructure ebb and flow with the unpredictable trends of rainfall and water availability, whilst investment in sewerage and drainage is dictated by more predictable variables such as population growth. Both areas face significant challenges as the industry seeks to secure and deliver a sustainable water supply and provide effective waste management infrastructure for population centres and industry.

Our team offers expertise across all areas of asset creation, optimisation and management, providing cost, time and outcome orientated solutions that support the successful delivery of water and waste management projects. As experts in decentralised water system management, the MAK Water team is able to provide remote monitoring and operational support as well as on-site personnel.

The Smart Water People

Putting Technology to Work

By leveraging a variety of technological solutions our collaborative and comprehensive work management system.

Experts look to simplify your operations and add value to your bottom line. The MAK Water team accesses a large number of work orders and requests in real time, allowing us to benchmark performance across a variety of facilities. To keep MAK Water specialists connected and up to date, they utilise tablets, hand-held instrumentation, GPS, and wireless technologies.

Long-Term Strategy

To help ensure greater cost and energy efficiencies

We work with clients to develop an overall strategy for their facility's needs—now and in the future.

We like to create a goal-oriented strategy, specifying task accountability, providing informative reporting tools that help enable continuous improvement, and delivering superior service. It's a proven approach that can enhance productivity, energy efficiency, and cost control for the long haul.

Best-in-Class Technical Training

To help provide consistently high-quality service, our technicians undergo apprenticeships, manufacturer seminars, safety training, and regular code updates.

To all of this, we add our own project control system and audit procedures sessions, as well as specialised training. The majority of our operations and service team have Certificate 3 in Water Treatment operations and are supported by the MAK Water engineering team.

Safety/Quality/Productivity

These three concepts drive one single commitment to our clients and employees

It all starts with our dedication to safety.

MAK Water's safety management system meets the requirements of ISO 45001 and it's quality is accredited to ISO 9001.

Client Services

MAK Water are water treatment plant specialists, providing industrial waste water, sewage and water treatment solutions in Australia and overseas.

For more than 20 years, our solutions have been helping clients achieve cleaner water solutions that are both cost-effective and regulatory compliant.

MAK Water offers customised water management systems, owns a substantial hire fleet, and provides facilities management, service and maintenance for all types of water and wastewater treatment systems. A wide variety of consumables and chemicals for ongoing system performance and a complete range of standard products are also available.

MAK Water has built a reputation for delivering superior service and high performing systems, enabling clients to reduce operating costs and extend equipment life-cycles.
